TIDEWATER COASTAL OBSERVATION PROGRAM

TW-SE

13 JANUARY 2027

MEMORANDUM FOR RECORD

FROM: TIDEWATER MBSE LEAD, CHAIR OF THE MODEL CHANGE BOARD

SUBJECT: DISPOSITION OF PRIME DROP V1.1 (CDRL A003, SYSTEM MODEL)

REFERENCES: (A) CDRL A003, SYSTEM MODEL; (B) PRIME DROP ISSUE FOR V1.1 (PLANNED: OPENED AT INTAKE ON 11 JANUARY 2027); (C) DELTA AND IMPACT REPORT FOR DROPS V1.0 TO V1.1, PIPELINE DELTA JOB

1. Drop v1.1, delivered 8 January 2027 under CDRL A003, was received on 11 January 2027. Every file matched the sha256 recorded in its manifest.

2. Compared with drop v1.0, it adds 7 elements, removes none and changes 1. For the government model it adds one requirement, TW-SYS-017, changes the text of TW-SYS-006, and touches one verification case, TestStationObservations; no hand-made change has to be redone.

3. The change board met on 13 January 2027 and dispositioned the changes as follows:

Change	Prime ID	Disposition	Impact	Issue
New hygrometer in the sensor suite	Hygrometer, part hygrometer	Accept	none	#131, the December working assumption, confirmed
New requirement TW-SYS-017, relative humidity	TW-SYS-017	Accept; verified by TestStationObservations	none	planned: opened at intake
TW-SYS-006 text now matches DOORS	TW-SYS-006	Accept; closes DR-1	none	#84 (DR-1)

4. This drop closes DR-1 (#84), the TW-SYS-006 text drift, and confirms the government's working assumption about the hygrometer interface recorded in December (#131). It opens no new discrepancy reports.

5. Accepted changes are implemented through merge requests citing the prime change ID, in sprint 8.

6. The point of contact is the undersigned.
